Software Gestión de datos

Manual de usuario

#### 1. Descripción del producto

Este software permite la gestión de los datos registrados, su almacenamiento y su análisis.

## 2. Requisitos del sistema

### 2.1 Hardware:

CPU: PII600MHZ o superior Disco duro: 40G o superior Memoria: 512M o superior

#### 2.2 Sistema operativo:

Windows XP (32bit, 64bit), Windows Vista (32bit, 64bit), Win7 (32bit, 64bit), Windows8(x86/x64)

## 3.Tutorial de uso

### 3.1 Pantalla al iniciar

**Nota aclaratoria**: Datalogger, logger o dispositivo son términos que se refieren a una única cosa, el aparato que registra los datos de temperatura

Presionar para ver los datos del logger conectado al PC

Los datos del logger conectado nunca se guardan automáticamente, pulse este botón para guardar manualmente los datos del logger en la base de datos del programa.

Pulse este botón para acceder a la base de datos del programa.

Pulse aquí para exportar los datos a unos de los formatos disponibles (PDF, EXCEL, EFA) o si quiere mandar los datos por mail

Pulse aqui para acceder a la configuración del dispositivo (logger)

Pulse aqui para acceder a la configuración del sistema y a ajustes de envío por correo electrónico (mail)

Pulse aqui si quiere detener la grabación de datos del logger conectado al PC

#### Resumen de datos

#### Información del Datalogger

<u>Número de serie</u>  $\rightarrow$  ID única del dispositivo

<u>Hora/fecha Logger</u>  $\rightarrow$  Es la hora definida en el dispositivo (comprobar si hay cambio de huso horario)

<u>Descripción Datalogger</u>  $\rightarrow$  Campo editable por el usuario (100 caracteres)

#### Configuración Datalogger

<u>Intervalo de registro</u>  $\rightarrow$  Cada cuanto tiempo el logger registra la temperatura

<u>Memoria total</u>  $\rightarrow$  Capacidad total de registros del dispositivo

<u>Escala</u>  $\rightarrow$  2 opciones Celsius (°C) y Fahrenheit (°F)

<u>Estado</u>  $\rightarrow$  3 valores posibles:

"No encendido", el logger no registra datos

"Encendido", el logger está registrando datos

"Paro", el logger no registra datos

<u>Inicio retardado</u>  $\rightarrow$  Cuanto tiempo tarda en empezar a registrar datos tras ser encendido <u>Parar con botón</u> $\rightarrow$  Indica si el logger está habilitado para ser parado mediante el botón de pausa (II)

<u>Comenzó a registrar</u>  $\rightarrow$  Fecha en que el logger empezó a registrar datos

<u>Duración estimada</u>  $\rightarrow$  Fecha calculada en que el logger dejará de registrar. Depende de la Fecha en que comenzó a registra y el intervalo de registro. "No encendido" indica que el logger aún no se ha puesto en marcha.

<u>Parada manual</u>  $\rightarrow$  Si la parada con botón esta habilitada, muestra la fecha en que el logger se paró manulamente. "No encendido" indicaría que no se ha parado manulamente.

#### **Datos registrados**

<u>Total registros</u> → Número total de registros en el logger <u>Limite superior(Temp)</u> → Temperatura limite por encima de la cual salta la alarma <u>Max(Temp)</u> → Temperatura máxima alcanzada en registros <u>Primer registro</u> → Fecha en que se realizó el primer registro <u>Limite inferior (Temp)</u> → Temperatura limite por debajo de la cual salta la alarma <u>Min(Temp)</u> → Temperatura mínima alcanzada en registros Último registro → Fecha en que se realizó el último registro
